Information: Installing Sangoma Connect Desktop Softphone on Windows OS
- Sangoma is a company that develops and maintains an open source PBX platform called FreePBX
- Sangoma offers both mobile and desktop soft phone applications
- The executable is available via Github:
  https://github.com/sangoma/desktop-softphone/releases/tag/v3.8.0
- When you open the link under **"Assets"** you'll click on **"Sangoma-Phone-3.8.0-win-x64.exe"**
- The configuration is on my end when you open the application:
    - It will ask for a host name which is the domain name of the PBX
    - Username / Extension (from FreePBX)
    - Password (I generate the password)

Additional Information:
- I am providing you all this information to give you an idea how it works you've probably used a desktop soft phone I just don't want you to say "hey we can't download this for X reason" because there's 0 reasons why we couldn't download this application to the clients computer
- Sangoma Connect works by providing a set of APIS that developers can use to build custom integrations and applications that interact with the platform. These APIS allow devs to send requests to the platform and receive responses, enabling them to perform a variety of tasks such as initiating phone calls, sending text messages, and managing contacts

Summary:
- If you need anymore information let me know thank you for your help
